

fetter

A cross-platform command-line tool for system-wide Python package discovery, vulnerability analysis, and allow-list enforcement. Implemented in efficient multi-threaded Rust, fetter can scan entire systems in seconds.

Install

```
$ pipx install fetter
$ uvx fetter
```

Counting all Executables, Sites, Packages

```
$ fetter count
$ fetter -e python3 count
$ fetter -e python3 -e ~/.env/bin/python3 count
```

Listing & Searching Installed Packages

```
$ fetter scan
$ fetter search -p numpy*
```

Discovering Packages with Vulnerabilities

```
$ fetter audit
$ fetter audit --cvss
$ fetter audit --cvss=9.8
```

Enumerating & Purging Package Content

```
$ fetter unpack-count --pattern nltk-3.9.1
$ fetter purge-pattern --pattern nltk-3.9.1
```

Discovering Vulnerabilities for Any Package

```
$ fetter lookup-name cryptography
$ fetter lookup-name cryptography --cvss=9.8
$ fetter lookup-bound https://github.com/ModelTC/LightLLM.git
```

System-Wide Package Allow Listing

```
$ fetter derive --anchor lower write -o /tmp/bound.txt
$ fetter validate --bound /tmp/bound.txt
$ fetter validate --superset --bound /tmp/bound.txt
```
